

Innovation and Artificial Intelligence: Is it Good or Bad?

Hello Dennis,

Advancements in technology have been around forever. Thousands of years ago people were sailing down the Nile River. In 1807 Robert Fulton created his steamboat which allowed you to go up the Hudson River from New York to Albany in less than half the time it took sailing ships. The first computer in 1937, the first personal computer in 1974, and shortly after we introduced the internet. Then the smart phone age begins around 2007 and we are all connected to our smartphones. Then in 2017 we introduce Artificial Intelligence and for the first time we are not making things to help us as humans be more efficient and put information at our fingertips, we are creating things to replace us. So is this good is this bad, when should we use this, can we rely on this? Read this month's newsletter and decide for yourself.
